structures and has hit a glass ceiling of under a third. Women of color are suffering extraordinary exclusion across all elements of news.

## The good news:

- The US news media landscape enjoys the highest proportion of economics/business ( $60 \%$ ) and health editors ( $71 \%$ ) who are women among the six countries.
- Although still outnumbered by men's, the share of women's voices in news coverage in the US achieves the best ratio vs. men's out of the six countries. (For every woman's voice there are 1.7 men's voices in the news. This is a significantly better ratio than the global average of 1 to 3.3 ).
- A potential cumulative revenue opportunity of $\$ 11$ bn by 2027 and $\$ 38$ bn by 2032 exists globally from engaging women. For the US, the opportunity is \$2.7bn by 2027 and $\$ 9.4$ bn by 2032.

## The challenges that women face along the news value chain:

- In the US women are underrepresented as editors-in-chief (1 in 3), political editors (1 in 3) and foreign affairs editors (1 in 3), despite their representation in ministerial positions nearing parity. News lags behind society in terms of women's representation in top news leadership and in editorial leadership in the highest-profile beats.
- Compared to their proportion in the US working population ( $21 \%$ ), women of color are severely underrepresented in editorial roles, especially as editors in politics ( $3 \%$ ), foreign affairs ( $4 \%$ ), health ( $6 \%$ ) and economics/business ( $9 \%$ ).
- Women of color are experiencing extraordinary levels of cultural exclusion and remain invisible within news organizations and the news industry, both as leaders and as news protagonists/contributors in coverage. In addition, women of color are 4 times less likely to be political editors than men of color.
- Global news coverage of stories focusing on gender issues, including seven fundamental gender gaps, is largely absent. The majority of the US population (65\%) believe that women are portrayed stereotypically as sidekicks by the media.
- There are 12 solutions themes which news providers can use to interrupt existing journalistic biases and to intercept the marginalization of women in news leadership and in coverage (see Summary of solutions themes in report).
